A method is described for measuring the photochemical activity of titanium dioxide, based on the oxidizing action thereof on the Ag^{+} ion when it is subjected to ultraviolet radiation. The reaction is observed by measuring the loss of reflectance as a function of time (Chemistry--Physical, TT, v. 8, no. 9) (over)

A description is given of an apparatus for the measurement of the specific volume of yarns. The results of some experiments performed on this apparatus are described: variation of specific volume with yarn number and twist. Comparison is made between specific volume of wool yarns and high bulk acrylic yarns.
